

STOP MAKING GLUEMAS AND START RETAINING CLASS 6

Hello fellow Exiles, it is I Charles “Alan Team Trials” Shawarma here to save your account to help you get 375 carats and 7500 friend points every Monday morning. I’ve noticed a few people are making mistakes that are easy to correct to fix your teams in Team Trials so I decided it is my right to make a quick guide to help you fix this.

Note: I’ll be updating this with visual aids in the future so forgive me for it being very boneless right now.

Stop repeating running styles

Umamusume is a very obtuse game, and this is something that isn’t even factored when auto selecting a team, but repeating running styles will kneecap your score. Two pace chasers, two late surgeons, etc.

You want three different running styles on each team to get more points, you get more points by your running style performing the best in that style at random points during the race (highest placing late surger halfway through, pace, etc.). Making this mistake can cost you a lot of points especially if multiple teams have this issue.

Stop buying bad skills

This is something that takes more knowledge than anything else. It’s important to note that what a skill **does** is not as important as **if it can proc**. “On Your Left!” and “Mystifying Murmur” are really good skills for CMs, but they’re middling at best in TT. For example, OYL requires you to be in the lower half of the pack **in the late race**, which is when naturally your late surger should be surging to the front. It’s gamble potential is crazy for a CM, but it’s very likely to just miss because your uma naturally accelerated to 4th place. “Mystifying Murmur” requires you to be blocked, which is just inconsistent anyway.

Skills that are really good to get are ones that don’t have placement requirements. Hesitant/Subdued debuffs, distance/style corner and straightaway skills, vision buffs/debuffs, etc. If you’re ever in doubt ping me in the server or ask someone who has read this document 😊

Another thing to note is if the position matches the style. What I mean by this is if a skill requires a pace chaser to be in the back half? It’s really bad. Or a late surger to be in the front? Also really bad. Be on the lookout for these types of skills because while they can have great ceilings in CMs, they’re going to hurt your ability to get points in Team Trials.

Stop buying inherited uniques

Inherited uniques are expensive, and they often have hard to meet proc conditions. There are some exceptions to this rule, but generally try to avoid them like the plague. If a run has been gimped on hints so bad your only option is to buy an inherited unique, it was probably a low roll. Take the L, run her again, and just hit.

Your dirt and sprint team is EVERYTHING

Some of you might be newer to the game and don't have a large roster yet, that's okay. So before you organize your teams, make sure that this aspect is taken care of. In Trackblazer, finding umas that can run sprint, mile, medium, or even umas that can run dirt is Really difficult, and thus anyone who can run at least the Triple Tiara circuit with Dirt A and Sprint A for TT is a godsend. This is very specific to different accounts though so any help here should be sought out on your own time.

Play to the strengths of your deck

Whatever cards you run, should probably be the cards that will get you the highest rating. If you have good wit cards, you should run a wit deck. If you have good guts cards, you should run a guts deck. If you whale with time instead of money, you should run speed/power. 60RB is the ideal spot to be in, but 50RB is the bare minimum. There isn't much else to say here though, and if you are in a spot where 60RB or even 50RB is hard to manage with at least 2 speed/ 2 wit just hold your head high and try your best. I love you and am proud of you and Grand Live is just around the corner <3

FREQUENTLY ASKED QUESTIONS (this will be updated over time)

Runaway?

Runaway doesn't exist in Trackblazer, but in the future if I ever see you buy Runaway and I know you read this document I reserve the right to make fun of you. The problem with Runaways is that they lose a lot. They don't just lose 2nd-5th, they lose last place by a distance to an NPC. Please do not buy Runaway for TT umas. You might see some high level players buying Runaway, but the reasons for that are too long to get into here. Just ask me if you're curious but do NOT attempt it yourself.

I WILL MAKE FUN OF YOU I'M NOT KIDDING (out of love because I love you)

Groundwork on fronts?

Not needed, but if you see groundwork and you have any amount of skills that can proc in the early race you should get regardless of what style the uma is running.

What green skills should I get?

Sunny Days and Firm Conditions are always must buys.

For Sprint and Medium, you want Left-Handed and Standard Distance.

For Mile, Long, and Dirt, you want Right-Handed and Non-Standard.

If you run out of skills to get obviously you can break this rule but check to see if you can get any other skills first before doing so.

Okay inherited uniques?

For non front-runners skills like Triumphant Pulse (anything with "break out of the pack" in the description really) is alright to get. For fronts Operation Cacao (also good for pace) or Angling & Scheming, Plancha, Kiss for Courage (with a recovery obviously) are good if you run out of potential skills to get.

Geoff Keighley voice One more thing.

I've mentioned something a few times before called skill value. Skill value is a simple way to measure your uma's ability to proc skills.

One white (consistent, good skill) = 5sv

One gold (consistent, good skill) = 12sv

Inconsistent whites and golds = 2.5sv or 6sv, respectively

Generally I think you should strive at least for 100-110sv on all of your umas. But if you get like a UG3 uma with 99sv I wouldn't blame you if you put it on your team.

The easiest way to get more skill value is simply, race more. However much you think you can race, you can race more than that (probably).

I don't have much else to say here about it so I'm abruptly ending the document here. I will be updating this in the future too so I'll pin that when I get around to it.
